

PORTFOLIO

The presentation of this portfolio focuses on showing a selection of works developed for companies in an individual manner and in collective groups that I've guided with the goal of bringing professional services focused to the collaboration and design of architectural projects. Also in the production of digital material such as planimetry, 3D visualization, and interactives. I seek new opportunities for future projects offering my professional services as an individual architect and as a team organizer of interdisciplinary work according to what is needed.
